- Any many more....

For more details see [Products](#) .

Our key philosophy and business model is to provide affordable bespoke software with the quality, presentation and cost of "off the shelf" products. Conventionally bespoke software can be very expensive to develop and support can compromise their long term use. We provide software solutions at a set monthly fee which includes the core database, upgrades, support and within reason all ongoing development.

This business model provides great flexibility and benefits to our customers as it provides low initial outlay, fixed ongoing costs, no hidden charges, guaranteed long term support and the facility to extend the core system to meet the ever changing needs of your business.

To deliver our cost effective solutions we have spent a number of years developing a software framework which can be effortlessly enhanced with new functionality and allow the existing capabilities to be extended easily. This framework provides a consistent user friendly interface, full access control, secure logon, reliable reporting engine and connectivity to the core database. The framework utilises ©Microsoft SQL Server™ technology for its core database engine providing a reliable, expandable, high performance environment for managing mission-critical information securely.

If there is a requirement for a database solution KAMMS IT can deliver on time and at an affordable cost.
